

INTERNSHIPS

(Part-time/Full-time)

Trinomics is an independent international consultancy firm that provides research and advisory services in the fields of energy, environment, climate change and sustainability, mostly using economic tools and methods. We offer our knowledge and expertise to develop sustainable solutions to today's main socio-economic challenges on a local, regional, national and international level. We aim to contribute to better European and international policy-making by providing in-depth research to our public sector clients (such as the European Commission, the European Parliament, the World Bank, national governments, etc.) that analyses the relevant policy issues at stake and their potential consequences.

What are we looking for?

We are on a continuous basis looking for master-students with an interest in energy, environment and climate policies that can assist us on our daily work on conducting or acquiring assignments for the variety of clients that we work for. That means that you will be working with us to advise policy-makers on for example the most cost-efficient design of sustainability policies or understanding the economic, social and environmental impacts of upcoming legislation.

What do we offer?

You will gain hands-on experience with working in consultancy that conducts research and provides advice on important and extremely relevant challenges and opportunities for our society. You will be hosted and warmly welcomed in an informal working environment, where you can quickly get a lot of responsibility. You will be directly contributing to important project work as a full-fledged member of projects teams.

What skills and experience do we require?

This work demands excellent analytical skills and writing skills, a strong interest in energy, environment and/or climate change topics, an eye for detail and the willingness to go the extra mile when necessary. Fluency in English is required; knowledge of Dutch and/or another language is an advantage. Moreover, the candidate should also have at least some of the following skills:

- **Quantitative analytical capacities** - including experience with Stata, Excel (advanced) or SPSS for example for the support of econometric or data-heavy analyses;
- **Developed qualitative research skills**, for example for (the support of) literature research;
- **Commercial ability** - for example for supporting our business development and acquisition processes;
- **Good communication skills** - for working in a team or organising/conducting interviews for ongoing projects.

Interested?

If you are interested in an internship position at Trinomics, please submit:

- Your most recent CV;
- Your University grades (both Bachelor and Master, to date)
- Your motivation letter (if applicable a suggestion of topic(s) you are interested to write your thesis on)

Applications should be submitted to Jeroen van der Laan (Jeroen.vanderLaan@trinomics.eu).
